Commentaar vóór 2012-03-03

Als Europees normontwerp is gepubliceerd: prEN 16344:2011, IDT

Definitief vastgestelde normen zullen als Nederlandse norm gelden. Daarom wordt dit normontwerp in Nederland voor commentaar gepubliceerd. Op het ontwerp ingebracht commentaar zal aan de bevoegde normcommissie worden voorgelegd die hiermee rekening zal houden bij de bepaling van de Nederlandse stem. Indien er geen bezwaar bij NEN wordt gebracht, kan dat leiden tot ongewijzigde definitieve vaststelling van het ontwerp als norm.

Van Europese normen bestaan drie officiële versies: Engels, Frans en Duits. Voor Nederland zal de Engelse versie gelden. Daarnaast kan er gekozen worden voor een andere geautoriseerde versie in het Nederlands.

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 392.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

**Warning** : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

 NEN-EN 16344:2011

## Foreword

This document (prEN 16344:2011) has been prepared by Technical Committee CEN/TC 392 "Cosmetics", the secretariat of which is held by AFNOR.

This document is currently submitted to the CEN Enquiry.

## Introduction

Reference is made to the relevant Annex of the Regulation (EC) No 1223/2009 of the European Parliament and of the Council of 30 November 2009 on cosmetic products:

Annex VI List of UV-Filters allowed in cosmetic products

## 1 Scope

This draft standard describes a multi-screening method using reversed-phase HPLC for the detection of UV filters listed in Annex VI of the Regulation (EC) No 1223/2009. The method is applicable for the quantitative determination of 10 UV filters which are mainly used in emulsion-based sun screen products and sun screen sprays particularly with regard to the maximum concentration listed in Annex VI.

Other analytical methods for the qualification and quantification of UV filters may be used if they lead to comparable results.

## 2 Terms and definitions

For the purposes of this document the following terms and definitions apply.

### 2.1

#### UV filters

organic chemical compounds that absorb ultraviolet light and inorganic substances that reflect, scatter and absorb UV light, they are used in sunscreen products to protect the skin against UV radiation

NOTE The UV filters and UV absorber of this method are only organic chemical compounds.

## 3 Principle

The UV filters are extracted with an acetone/methanol mixture. For the qualitative detection of the listed UV filters and the quantitative determination of the 10 validated UV-filter reversed phase HPLC with UV (DAD) detection is used. The method is also applicable for the quantification of the other listed UV filters after proper validation.

For the quantitative determination of samples containing the following UV-filters additional extraction methods and determinations are required

Terephthalylidene Dicamphor Sulfonic Acid (TDSA) and Disodium Phenyl Dibenzimidazole Tetrasulfonate (DPDT) are extracted additionally with methanolic-aqueous sodium hydroxide solution.

Methylene Bis-benzotriazolyl Tetramethylbutylphenol (MBBT) and Bis-Ethylhexyloxyphenol Methoxyphenyl Triazine (BEMT) are extracted additionally with a tetrahydrofuran/acetone mixture.

In the case of an unsatisfactory peak shape Butyl Methoxydibenzoylmethane (BMDM) is extracted additionally with an acetone/methanol/EDTA mixture.

The quantitative determination is made by means of RP-HPLC with UV (DAD). The UV-spectra are compared with the reference spectra in a database.

The concentration of each UV filter determined in accordance with this method is given in g/100 g.

## 4 Reagents

### 4.1 General

If not otherwise specified, analytical-grade chemicals shall be used; the water shall be distilled or of a corresponding purity. "Solution" shall be understood as an aqueous solution unless otherwise specified.

4.2 **Methanol (MeOH)**, HPLC grade

4.3 **Acetone**, HPLC grade

4.4 **Tetrahydrofuran (THF)**, HPLC grade

4.5 **Ammonia solution**, mass fraction  $\omega = 25$  g/100 g

4.6 **Sodium hydroxide solution**, molar concentration  $c = 1$  mol/l

4.7 **Ethylenediaminetetraacetic acid (EDTA) disodium salt dihydrate** ( $\text{Na}_2\text{EDTA} \times 2\text{H}_2\text{O}$ , CAS 6381-92-6, purity  $\geq 99$  %)

### 4.8 EDTA solution

Weigh 1,8 g of EDTA disodium salt dihydrate (4.7) into a 100 ml volumetric flask and fill up to the calibration mark with water.

4.9 **Ethanol**, HPLC grade

4.10 **Lauryl Trimethyl Ammonium Bromide** (LTAB, synonym: dodecyltrimethylammonium bromide, CAS 1119-94-4) if possible HPLC quality (purity  $\geq 98$  %)

4.11 **Ammonium bromide** (CAS 12124-97-9, purity  $\geq 99$  %)
