Thermische zonne-energiesystemen en componenten - Op maat gebouwde systemen - Deel 5: Prestatieproeven voor regelapparatuur

Publicatie uitsluitend voor commentaar

Thermal solar systems and components - Custom built systems - Part 5: Performance test methods for control equipment

juli 2017
ICS 27.160

Commentaar vóór 2017-08-28

Zal vervangen NEN-EN 12977-5:2012

Als Europees normontwerp is gepubliceerd: FprEN 12977-5:2017,IDT

Definitief vastgestelde normen zullen als Nederlandse norm gelden. Daarom wordt dit normontwerp in Nederland voor commentaar gepubliceerd. Op het ontwerp ingebracht commentaar zal aan de bevoegde normcommissie worden voorgelegd die hiermee rekening zal houden bij de bepaling van de Nederlandse stem. Indien er geen bezwaar bij NEN wordt gebracht, kan dat leiden tot ongewijzigde definitieve vaststelling van het ontwerp als norm.

Van Europese normen bestaan drie officiële versies: Engels, Frans en Duits. Voor Nederland zal de Engelse versie gelden. Daarnaast kan er gekozen worden voor een andere geautoriseerde versie in het Nederlands.

Normcommissie 349010 "Zonnewarmte"

THIS PUBLICATION IS COPYRIGHT PROTECTED

DEZE PUBLICATIE IS AUTEURSRECHTELIJK BESCHERMD

Apart from exceptions provided by the law, nothing from this publication may be duplicated and/or published by means of photocopy, microfilm, storage in computer files or otherwise, which also applies to full or partial processing, without the written consent of the Royal Netherlands Standardization Institute.

The Royal Netherlands Standardization Institute shall, with the exclusion of any other beneficiary, collect payments owed by third parties for duplication and/or act in and out of law, where this authority is not transferred or falls by right to the Reproduction Rights Foundation.

Auteursrecht voorbehouden. Behoudens uitzondering door de wet gesteld mag zonder schriftelijke toestemming van het Koninklijk Nederlands Normalisatie-instituut niets uit deze uitgave worden verveelvoudigd en/of openbaar gemaakt door middel van fotokopie, microfilm, opslag in computerbestanden of anderszins, hetgeen ook van toepassing is op gehele of gedeeltelijke bewerking.

Het Koninklijk Nederlands Normalisatie-instituut is met uitsluiting van ieder ander gerechtigd de door derden verschuldigde vergoedingen voor verveelvoudiging te innen en/of daartoe in en buiten rechte op te treden, voor zover deze bevoegdheid niet is overgedragen c.q. rechtens toekomt aan de Stichting Reprorecht.

Although the utmost care has been taken with this publication, errors and omissions cannot be entirely excluded. The Royal Netherlands Standardization Institute and/or the members of the committees therefore accept no liability, not even for direct or indirect damage, occurring due to or in relation with the application of publications issued by the Royal Netherlands Standardization Institute.

Hoewel bij deze uitgave de uiterste zorg is nagestreefd, kunnen fouten en onvolledigheden niet geheel worden uitgesloten. Het Koninklijk Nederlands Normalisatie-instituut en/of de leden van de commissies aanvaarden derhalve geen enkele aansprakelijkheid, ook niet voor directe of indirecte schade, ontstaan door of verband houdend met toepassing van door het Koninklijk Nederlands Normalisatie-instituut gepubliceerde uitgaven.

EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM

FINAL DRAFT
FprEN 12977-5

July 2017

ICS 27.160

Will supersede EN 12977-5:2012

English Version

Thermal solar systems and components - Custom built systems - Part 5: Performance test methods for control equipment

Installations solaires thermiques et leurs composants - Installations assemblées à façon - Partie 5 : Méthodes d'essai de performances pour systèmes de régulation

Thermische Solaranlagen und ihre Bauteile - Kundenspezifisch gefertigte Anlagen - Teil 5: Prüfmethode für die Regeleinrichtungen

This draft European Standard is submitted to CEN members for unique acceptance procedure. It has been drawn up by the Technical Committee CEN/TC 312.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

FprEN 12977-5:2017 (E)**European foreword**

This document (FprEN 12977-5:2017) has been prepared by Technical Committee CEN/TC 312 “Thermal solar systems and components”, the secretariat of which is held by ELOT.

This document is currently submitted to the Unique Acceptance Procedure.

This document will supersede EN 12977-5:2012.

This document has been prepared under the Mandate M/534 “Standardisation request to the European standardisation organisations pursuant to Article 10(1) of Regulation (EU) No 1025/2012 of the European Parliament and of the Council in support of implementation of Commission Regulation (EU) No 814/2013 of 2 August 2013 implementing Directive 2009/125/EC of the European Parliament and of the Council with regard to ecodesign requirements for water heaters and hot water storage tanks and Commission Delegated Regulation (EU) No 812/2013 of 18 February 2013 supplementing Directive 2010/30/EU of the European Parliament and of the Council with regard to the energy labelling of water heaters, hot water storage tanks and packages of water heater and solar device” which was given to CEN by the European Commission and the European Free Trade Association.

EN 12977 is currently composed with the following parts:

- *Thermal solar systems and components — Custom built systems — Part 1: General requirements for solar water heaters and combisystems;*
- *Thermal solar systems and components — Custom built systems — Part 2: Test methods for solar water heaters and combisystems;*
- *Thermal solar systems and components — Custom built systems — Part 3: Performance test methods for solar water heater stores;*
- *Thermal solar systems and components — Custom built systems — Part 4: Performance test methods for solar combistores;*
- *Thermal solar systems and components — Custom built systems — Part 5: Performance test methods for control equipment.*

Introduction

One purpose of this document is to define how to check that a controller is behaving as it is intended when in combination with associated equipment (e.g. sensors, pumps and other actuators). In addition, function testing of differential thermostats and so-called “multi-function” controllers are described in order to determine switch on and switch off temperature differentials as well as control algorithms where dependent on temperature differences, temperature levels or operating conditions of the system. For all functions and operations, it should be tested and documented, whether the controller and control equipment comply with the manufacturer's guidance.

In addition, the capability for all sensors to resist extreme operating conditions and to determine any significant drift in accuracy caused by this should be tested. The energy consumption of the controller and the associated control equipment should be documented, e.g. actuators. If the electrical supply is different from the mains supply this should be documented, e.g. PV powered pumps.

Performance predictions for the associated system that the control equipment belongs to are considered. For the determination of the component parameters according to the CTSS method, as specified in FprEN 12977-2:2017, a detailed investigation of all relevant algorithms, features and parameters controlling the system is relevant.

The most widely used control equipment for solar heating systems is described in FprEN 12977-5:2017. For control equipment not widely used in solar heating systems or auxiliary heaters, if part of the system, accompanying standards should be applied if available.

In respect of potential adverse effects to human health or life (e.g. drinking water quality) caused by the products covered by FprEN 12977-5:2017 it should be noted that:

- this document provides no information as to whether the product may be used without restriction in any of the Member States of the EU or EFTA;
- while awaiting the adoption of verifiable European criteria, existing national regulations concerning the use and/or the characteristics of this product remain in force.

EN 12976-1:2017, EN 12976-2:2017 as well as FprEN 12977-1:2017, FprEN 12977-2:2017, FprEN 12977-3:2017, and FprEN 12977-4:2017 distinguish two categories of solar heating systems:

- 1) factory made solar heating systems;
- 2) custom built solar heating systems.

As defined in FprEN 12977-1:2017, the classification of a system as factory made or custom built is a choice of the final supplier.

Custom built solar heating systems are subdivided into two categories:

- a) large custom built systems are uniquely designed for a specific situation;
- b) small custom built systems offered by a company are described in a so called assortment file, in which all components and possible system configurations, marketed by the company, are specified;

FprEN 12977-5:2017 (E)**1 Scope**

This European Standard specifies performance test methods for control equipment. Furthermore, this document contains requirements on accuracy, durability and reliability of control equipment.

The tests described in this document are limited to electrically activated components delivered with or for the system by the final supplier. For the purposes of this document controller and control equipment for solar heating systems and auxiliary heaters, if part of the system, are restricted to the following:

- a) Controllers as:
 - 1) system clocks, timers and counters;
 - 2) differential thermostats;
 - 3) multi-function controllers.
- b) Sensors as:
 - 1) temperature sensors;
 - 2) irradiance sensors (for short wave radiation);
 - 3) pressure sensors;
 - 4) level sensors;
 - 5) flow meters;
 - 6) heat meters.
- c) Actuators as:
 - 1) pumps;
 - 2) solenoid and motor valves;
 - 3) relays.
- d) Combinations of controllers, sensors and actuators listed above.

An additional objective of the procedures described in this document is to verify control algorithms and, together with the accuracy of sensors, to determine control parameters. In addition to verifying the functioning of a controller, its equipment and actuators, the determined parameters may be used for numerical system simulations.

Typically, electrical anodes are not part of the control equipment and are not controlled by the control equipment. However, because they are electrical appliances, electrical anodes are included in this document.

This document is valid for control equipment of solar heating systems for the purpose of hot water preparation and/or space heating. If the solar system is connected to or part of a conventional heating system, the validity is extended to the entire system. In combination with the standards EN 12976-1:2017, EN 12976-2:2017 as well as FprEN 12977-1:2017, FprEN 12977-2:2017, FprEN 12977-3:2017 and FprEN 12977-4:2017, this document is valid for

- e) factory made solar heating systems,
- f) small custom built solar heating systems,
- g) large custom built solar heating systems,
- h) auxiliary heater equipment used in connection with e), f) and g).

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
