 NEN-ISO 17325-3:2018

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 8, *Ships and marine technology*, Subcommittee SC 2, *Marine environment protection*.

A list of all parts in the ISO 17325 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document specifies the design of end connectors of oil booms. It has been developed after considering the existing ASTM standards and national legislative requirements, and discussions with individuals involved in the development of these standards. This document incorporates and acknowledges the use of and refers to many of the elements provided in ASTM F962 and F2438.

This document gives some general guidelines for oil boom manufacturers as well as users with regard to subjects dealing with producing and purchasing such types of equipment. This document does not define any specific type and size of connector for a particular application, as so many variables have to be taken into consideration.

The American Society for Testing and Materials (ASTM) Committee F-20 has published two standards relating to boom connectors (ASTM F962 and F2438). ASTM F1093 specifies static laboratory tests of the strength of an oil spill response boom under tensile loading. ASTM F1523 provides a guide on the selection of a containment boom that may be used to control spills of oil and other substances that float on the water.

The Japanese Industrial Standard JIS F9900 (Parts 1 and 2) provides the necessary conditions and specifications for the design, manufacture, and other aspects of oil booms and connectors.

It is the responsibility of the user of this document to establish appropriate safety and health practices prior to use.

Ships and marine technology — Marine environment protection — Oil booms —

Part 3: End connectors

1 Scope

This document specifies the requirements for the design of end connectors of oil booms used for the prevention of spreading of oil spills on water. These criteria are intended to define minimum mating characteristics and are not intended to be restricted to a specific configuration.

It should be considered that different types of connectors are preferably used in different areas. This document does not define any priority. It remains the responsibility of manufacturers and users to select the right connector for the intended application.

Stability features of boom connectors are the result of interaction between bodies of booms and connectors.

This document does not purport to address all safety concerns, if any, associated with its use. However, it is the responsibility of the user of this document to establish the appropriate safety and health procedures, and to determine the applicability of regulatory limitations.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 16165, *Ships and marine technology — Marine environment protection — Terminology relating to oil spill response*

ISO 17325-2, *Ships and marine technology — Marine environment protection — Oil booms — Part 2: Strength and performance requirements*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 16165 apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- EC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

4 Design considerations

The design of end connectors shall have the following characteristics:

- adequate mechanical strength;
- minimize oil leakage;

ALTIJD DE ACTUELE NORM IN UW BEZIT HEBBEN?

Nooit meer zoeken in de systemen en uzelf de vraag stellen:
“Is NEN-ISO 17325-3:2018 en de laatste versie?”™

Via het digitale platform NEN Connect heeft u altijd toegang tot de meest actuele versie van deze norm. Vervallen versies blijven ook beschikbaar. **U en uw collega's** kunnen de norm via NEN Connect makkelijk raadplagen, online en offline.

Kies voor slimmer werken en bekijk onze mogelijkheden op www.nenconnect.nl.
