Collection of international standards for paints and varnishes

NEN and ISO has published the fourth edition of the collection of all relevant international standards for paints and varnishes. This collection reflects the efforts of standard developing experts around the world over the years.

These experts translate their state of the art knowledge into standards and will continue to do so. In turn, these standards provide the basis for a further increase in quality and innovative concepts. Ensure the quality of your product by using this exceptional set of standards we're offering at an extremely reasonable price.

The Paints and Varnishes international standards handbook consists of the following volumes:

- Vol 1 General test methods, Part 1
- Vol 1 General test methods, Part 2
- Vol 2 Raw materials
- Vol 3 Preparation and protection of steel substrates

The standards collected in this handbook have been developed by experts from all stakeholders involved in the paints and varnishes

industry, including research institutes, applicators, users and suppliers of allied devices, e.g. test apparatus. No standards would exist without their efforts and participation in the standardization activities.

Standard development

If you are interested in participating in the development of standards, if you want to influence the content of standards, or if you have other questions, please contact your national standardization body or contact the secretariat of ISO/TC 35 Paints and varnishes, held by NEN chemistry@nen.nl.

With the addition of new experts and stakeholders, we trust that the high quality of international standards can enjoy further merits of innovation, and that the innovation will be reflected in new standards, for the benefit of all stakeholders.
